

Automated screening solutions for visitor & staff health-checks with entry logs

HVS offers state-of-the-art FR Terminal scanners from CBC-Ganz, a global market leader in surveillance, biometrics and access control technology. The Ganz FR Face Recognition Access Control Terminal with Digital Temperature Measurement Module comes standard with the following selectable functions:

- Touchless Temperature Scan Check
- Face Mask & Helmet Detection
- Face Recognition (.2sec response & storage of up to 10,000 faces)
- Clear visual and audio-voice prompts
- Event logging (Date,Time,Name,ID#, Temperature,Face)
- Reception desk 2-way audio intercom through web browser
- Wiegand I/O can interface into most access-control systems
- QR code scanning
- Alarm I/O can integrate with fire, tamper, door magnet, security gate
- ONVIF protocol supporting VMS system integration

Streamline your Visitor Screening Process

HVS now offers an optional integrated 'Screening Questionnaire' add-on touch screen. When someone presents their face to the Ganz terminal, it will obtain the person's temperature, identify the person through face recognition if enabled, and then activates the screening questionnaire screen. The person will touch yes/no, prompted for their name and contact# if not registered, and then the system will add the collected data to a daily capture log automatically. Reception attendant can be notified of results instantly for next steps.

Contact HVS today for more information or to book a demonstration.
